NOTA BENE

1) The plughole drainage system must always be fixed to the washbasin; it is therefore recommended that the holes made in the tops on which the washbasins are mounted have a diameter large enough to accommodate this. As far as our products are concerned, please refer to the Technical Characteristics section of the General Catalogue to obtain details of the specific measurements necessary for the holes made in the tops.

2) The minimum recommended diameter of the hole to be made in the top for the passage of the water connections to the tap is 40 mm. Please make sure you also check the technical specification of the tap used before making the hole.

Specification outlining certifications and conformity with standard UNI EN 997 (relating to WC waste pipes) and corresponding CE branding.
